Flash Flood: Crisis Communication Challenges at a Regional Medical Center

Fredricka Joyner, Indiana University East
David Frantz, Indiana University East
Lynne Maguire, Columbus Regional Hospital

SYNOPSIS
This decision case gives students an opportunity to think about communication needs related to an organization’s recovery from a crisis created by a flood. Columbus Regional Hospital (CRH) experienced a disaster on a scale few other hospitals have survived – a flood of historic magnitude severely damaged the hospital, forcing it to close its doors for the first time in its 90-year history. In a matter of minutes, the flooding destroyed several critical functions and systems. When all was said and done, CRH incurred more than $200 million in damages, although this figure was not known for many months.

LEARNING OBJECTIVES
The objectives in this case are to:

1. Identify the dynamics and variables associated with responding to a crisis.
2. Identify key stakeholder groups.
3. Construct a communication plan that reflects the perspectives and information needs of key stakeholder groups.
4. Describe the role that social media might play in a crisis communication plan.
5. Describe the role that an organization’s vision statement can play during the recovery period after a crisis.
6. Articulate the importance of public institutions communicating in ways that calm and build/maintain trust with the stakeholder groups in the face of incomplete information.

APPLICATION
This case could be used with either undergraduate or graduate students and can be used in a variety of courses that include content such as crisis management, change management, strategic planning, and/or intervening in organizational systems, where there is a critical communications component.

KEY WORDS
Crisis Communication, Health Care, Strategy
